

Amayzin RV Inspections and Services

Inspection Set-up – Towable RVs (Travel Trailer, Fifth Wheel, Toy Hauler)

Thank you for working with our mutual client to schedule the NRVA Certified RV inspection with Amayzin RV Inspections & Services, LLC.

Two NRVA Certified RV Inspectors will be onsite to perform the RV inspection.

Onsite inspection time estimates:

- Travel trailer – 4 hours
- Fifth wheel – 5 to 6 hours
- Toy hauler – 5 to 6 hours

To ensure tests can be performed on all the systems on the RV, the following is required:

- Electrical hook-up
- Water hook-up
- Propane on board
- 12V coach battery/batteries on board
- Sewer connection (if available)
- Fuel on board, if equipped with a generator
- Space to extend the awning(s) and slideout(s), if equipped
- Space to access and walk around all sides of the RV
- Keys to the RV, so the locks for the door(s) and cargo bay(s) can be tested

Please turn on the refrigerator prior to the inspection so that it may reach operating temperature.

- RV absorption refrigerator: please turn on at least 12 (twelve) hours prior to the inspection.
- Residential refrigerator: please turn on at least 4 (four) hours prior to the inspection.

Amayzin RV Inspections & Services, LLC does not provide water hoses, sewer hoses or connections, electrical adaptors or connectors, generators, propane, batteries or fuel. Please make sure these are all available prior to the scheduled inspection time.

Amayzin RV Inspections & Services, LLC will not be responsible for testing water systems if an RV has been winterized, unless the owner gives permission to dewinterize the RV. If an RV is dewinterized during the course of an inspection, Amayzin RV Inspections & Services, LLC does not rewinterize the RV at the end of the inspection. Rewinterization is to be arranged between the owner and potential buyer.

Towable units are not hitched or moved to assess towability.
